Lanyard Device Worn by Rigger

Crane Mounted Alert Device

THE BUDDIE SYSTEM is a wireless instant safety alert device designed for crane operators and riggers enabling rapid alarm activation in emergencies.

It addresses the key safety issues associated with miscommunication between riggers and crane operators, greatly reducing the risk of injury and fatalities.

With a staggering 30 percent of crane related accidents involving some form of miscommunication, **THE BUDDIE SYSTEM** substantially helps avoid many of these potential accidents by overcoming the key shortfalls of existing two-way radio technology and often inaudible backup whistles.

A quick snap on **THE BUDDIE SYSTEM** lanyard activates the alarm. **It's that simple!**

REDUCE THE RISKS, AVOID THE PAIN, PROTECT YOUR PEOPLE AND SAFEGUARD YOUR BUSINESS.
